PROFESSIONAL OBJECTIVE

Recent Computer Science graduate with hands-on experience in web, full-stack, and mobile application development, REST APIs, databases, and software development. Experienced with JavaScript, React, Angular, Python, Django, C++, and SQL through academic and personal projects. Seeking an opportunity to contribute to real-world software projects, apply my technical skills, and continue growing as a software engineer.

PROFESSIONAL EXPERIENCE

VATP Intern

July 2025 – August 2025

NECOP | Islamabad, Pakistan

- Assisted in penetration testing and security assessments of network-connected devices, including cameras, routers, desktops, laptops, and other electronic systems.
 - Performed vulnerability assessments using industry-standard tools such as Burp Suite, Nmap, Nessus, and the organization's indigenous automated security testing platform.
 - Identified and documented security vulnerabilities, validated findings, and contributed to technical assessment reports.
 - Conducted web application and network security testing under the guidance of senior security professionals, following established testing methodologies.

Projects

Factory Management System

Django | React | Tailwind CSS | MySQL

- Designed and developed a full-stack Factory Management System to streamline order processing, inventory management, production tracking, and billing operations.
- Architected a Django REST Framework backend with a React.js frontend, integrating MySQL for centralized, reliable data management.
- Implemented role-based access control to improve operational efficiency, data organization, and workflow security across departments.
- Deployed the application to production (Railway & Vercel), resolving real-world deployment challenges including CORS/CSRF configuration, static file storage, and API routing.

Chatbot-Based Vulnerability Scanner (Final Year Project)

Django | React | Tailwind CSS | Groq API | Nmap | Metasploit

- Designed and developed an AI-assisted vulnerability scanning platform that enables non-technical users to perform security assessments through natural language interactions.
- Integrated Nmap, Metasploit, and a Large Language Model (Groq API) to automate vulnerability scanning and generate AI-assisted security insights.
- Built a full-stack web application (Django REST Framework + React.js) that transforms raw scan results into organized, human-readable reports with AI-generated explanations.

Document Editor

React | Django | REST API | JavaScript

- ▶ Developed a web-based document editor for creating, editing, formatting, and managing online test documents through an interactive browser-based interface.
- ▶ Implemented file import and export functionality supporting TXT and Markdown (.md) files, enabling users to work with existing documents and export their content in Markdown format.
- ▶ Built a Django REST Framework backend with a React.js frontend to manage documents, user interactions, file operations, and API-based communication.
- ▶ Implemented document sharing between users, allowing users to securely share and collaborate on test documents through the platform.
- ▶ Added rich text editing and dynamic document management features to streamline the creation, organization, and modification of online assessments.

Safe Route Mobile Application

Flutter | Firebase | Feed Forward Neural Network | MapBox Api

- ▶ Developed a mobile application using Flutter and Firebase.
- ▶ Integrated the Mapbox API for location-based services and implemented a Feed Forward Neural Network to predict the safety score of a route on a scale of 1 to 10, helping users identify safer travel paths.

Computer Store Website

PHP | MySQL

- ▶ Developed a database-driven web application for managing computer products and customer information.
- ▶ Implemented product management, user interaction, and MySQL database integration for efficient data handling.

File Compression Utility

C++ | Huffman Algorithm | WinForms

- ▶ Developed a file compression and decompression application using the Huffman Coding algorithm to reduce file sizes efficiently through lossless compression.
- ▶ Designed a WinForms-based GUI that simplified the file compression and decompression process with an intuitive user interface.

File and Image Encryption/Decryption Tool

C++ | RSA | Caesar Cipher

- ▶ Developed a tool to encrypt and decrypt files and images using RSA and Caesar Cipher algorithms.
- ▶ Implemented secure encryption and decryption workflows to demonstrate fundamental cryptographic concepts.

EDUCATION

BS Computer Science

2022 - 2026

Bahria University, Islamabad Pakistan

CGPA: 3.59

Fsc Pre Engineering

2020 - 2022

Punjab Group Of Colleges Blue Area Islamabad, Pakistan

Marks:917/1100

Percentage: 83.4%

KEY ACHIEVEMENTS

- Achieved 92.2 percentile in the National Skills Test (NST).
- ICPC 2026: Qualified for the Regional Round and competed against top university teams.
- SOFTEC 2026: Qualified for the Final Round of the programming competition.
- NUMLOG 2025: Participated in the national programming competition.
- NASCON 2025: Participated in the national programming competition.

TECHNICAL SKILLS & TOOLS

Programming Languages: C++, Python, SQL

Web Development: HTML, CSS, PHP

Frameworks & Libraries: Django, React, Flutter

Database Management: MySQL

AI & LLM Technologies: LLM Integration (Groq API)

Software Development Concepts: Object-Oriented Programming (OOP), REST APIs

Operating Systems: Windows, Linux (Basic)

Tools & Technologies: GitHub, Visual Studio Code, Visual Studio, Xamp, Cisco Packet Tracer, Selenium

Cybersecurity Tools: Nmap, Nessus, Burp Suite

LANGUAGES

Urdu: Native / Fluent | **English:** Professional Proficiency
